

一 . 启用

```
127 = { set_state_flag = has_city_story }
```

在你需要的 state 上加上 state_flag(has_city_story)以启用

二 . 图片

存放位置: gfx > interface > gui > city_pic

注册: interface > ≡ Adorable_heart_city_story.gfx

三 . 动态本地化

位置: common > scripted_localisation > ≡ Adorable_heart_city_story.txt

使用:

```
on > scripted_localisation > Adorable_heart_city_story.txt
defined_text = {##标题（城市名）
    name = Adorable_heart_city_story_title
    text = {
        trigger = {
            state = 64
        }
        localization_key = Adorable_heart_city_story_title_Germania
    }
    text = {
        localization_key = Adorable_heart_city_story_title_generic
    }
}

defined_text = {##文字介绍
    name = Adorable_heart_city_story_desc
    text = {
        trigger = {
            state = 64
        }
        localization_key = Adorable_heart_city_story_desc_Germania
    }
    text = {
        localization_key = Adorable_heart_city_story_desc_generic
    }
}

defined_text = {##图片
    name = Adorable_heart_city_pic
    text = {
        localization_key = GFX_Berlin_city_pic
    }
}
```

一目了然
